A CONSUMER'S GUIDE TO EVALUATING MEDICAL TECHNOLOGY

By Shelly Frost, MPA
Zita Fearon

Herbert Hyman, PhD

CONSUMER COMMISSION ON THE ACCREDITATION OF HEALTH SERVICES, INC.

This manual is particularly useful for consumers, health care professionals, and board members involved with health facility planning, and also as a text for health administration students. It offers a practical, systematic procedure to sort out the facts on proposals for new facilities or technologies and is designed to help consumers and health care professionals make informed judgments when faced with decisions about costly medical equipment. It details the legal role of the consumer in health planning and facility board operations and provides a guide to the key questions to ask when confronted with decisions regarding acquisition and distribution of medical technology. The questions presented cover the areas of need, safety, efficacy and effectiveness, cost, regional impact, and consistency with the Health Systems Plan which is prepared by a Health Systems Agency to detail regional health goals. This work, written in straightforward style, including a concise glossary of medical and technical terms, is an important step in presenting information that can help consumers evaluate the discussions when investments in new facilities or technologies are proposed.
